

**[LAB2\_2]** Write a C program that acts as a basic calculator. It should take two integers and a list of arithmetic operator: '+' (plus), '-' (minus), '\*' (multiply) and '/' (division).

**Input**

a o b indicates 1<sup>st</sup> integer, operator and 2<sup>nd</sup> integer respectively, separating a white space.

**Output**

The calculation of the two integers and the given operator. In case of a floating-point number, display it with two decimal places.

Input samples	Output samples
1 + 2	3
3 - 4	-1
-7 / -2	3.50
