[**LAB3_4**] Create a C program using a **while** loop that reverses the digits of a number. For example, if the input is 12345, the output should be 54321.

**Input**

n denotes an integer, where  1 <= n <= 999,999

**Output**

The reversed order of the number n

| Input sample | Output sample |
|---|---|
| 12345 | 54321 |
| 1223 | 3221 |
